

Farm Sentinel Program

Prevention, protection,
peace of mind

Simple steps reduce the risks

Fire is a leading cause of loss for agricultural operations in Canada annually*. The Farm Sentinel Program by Intact Insurance is designed to help reduce the risk of fire in your livestock operations. Through the services of an authorized vendor, the program offers a simple, effective and efficient electrical safety solution that focuses on maintenance, monitoring and loss prevention.

How does it work?

 Simple installation	Smart sensors are installed at the main electrical service by your own electrician. Installation takes approximately two hours.
 Continuous surveillance	The sensors installed will monitor for electrical and thermal anomalies and faults on the farm's network - 24/7.
 Detection	The sensors detect: <ul style="list-style-type: none">• Non-conforming cabling and configuration• Motor degradation and faults• Faulty or inadequate ventilation and lighting components• An overheated breaker panel
 Communication	If an anomaly is detected, a text message and/or email will be sent to alert you and/or a designated electrician immediately. You also have access to a personalized dashboard to assist the diagnostic process and identify faults. The authorized vendor, in turn, will provide support that encourages corrective action to take place.

Protection and savings

- Simple set up, with efficient monitoring and reporting processes that update you or your electrician in real time
- The program can help reduce the risk of electrical fires and potential losses as the technology can detect issues and faulty components can be replaced or repaired before a costly fire occurs.
- Participating customers that sign up for the monitoring services can save on their annual insurance premium.**
